DIY Block Lamp

Materials List
(120) 1" Blocks
Wood Glue
(2) ¾" Screws
(1) Portable LED Bulb with Base

1. **Build the base of your lamp by using a thin layer of wood glue to glue together 25, 1" blocks into a square.**

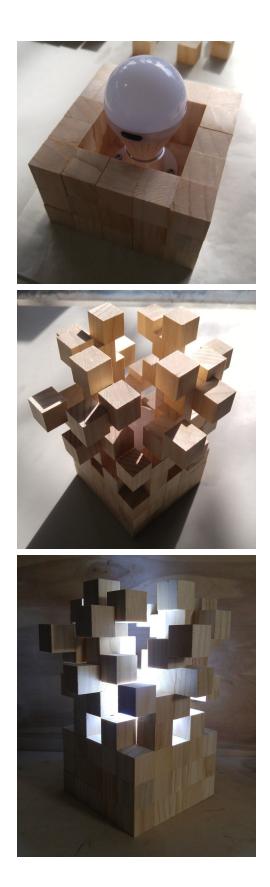

2. **Use the bulb base to mark the 2 screw holes and predrill to avoid splitting the wood.**

3. **Line up the bulb base with the predrilled holes and drive the 2 screws into the wood base.**

4. **Insert the bulb into the base to use as a reference while building the rest of your lamp.**

5. **Glue one layer of blocks on top of the perimeter of the base.**

6. **Glue a second layer of perimeter blocks on top of the first layer. This layer could start to have openings and blocks pushing outward (not pictured).**

7. **Continue to build up and out with blocks, making spaces for light to shine and letting your creativity guide your lamp's design.**

8. **Your block lamp might look something like this!**
